Experience:

Product Design Engineer - Electronic Arts

November 2025 - Present

- Architected a 70+ component SwiftUI design system with full token parity across color, typography, spacing, motion, and layout - establishing the visual foundation for the team
- Designing AI-native interaction systems in an innovation lab, defining new patterns for conversational behavior and responsiveness (0→1)
- Designed tactile interaction systems using spring physics, gesture-driven flows, and motion patterns to create a cohesive product feel
- Designed and shipped a character chat experience with eight emotion states using Metal shaders and dynamic avatars, exploring how depth, motion, and sentiment-driven transitions could shape the feel of conversational AI
-

Product Design Engineer - Sidework

March 2024 - March 2025

- Led end-to-end product design for a 0→1 technical product, owning research, system design, prototyping, usability testing, and frontend implementation
- Redefined core workflows through behavioral research and user interviews, reducing user errors and support tickets by 40%
- Re-architected the product's UI system to align interaction patterns, workflows, and components into a cohesive and scalable structure
- Redesigned a complex coffee machine interface into an intuitive system, reducing cognitive load and enabling product scaling from 1 pilot machine to 100+ deployments

iOS Engineer - Spotify

October 2022 - March 2024

- Developed a new Ads UI, enhancing interactivity and delivering a 61% increase in overall click-through rates and a 120% surge in global video click-through rates.
- Built a client-side color-extraction algorithm using binary search to find the brightest brand-safe shade that passes WCAG AA — preserving advertiser identity while guaranteeing 4.5:1 contrast compliance.
- Worked across the full ads lifecycle (audio, video, and podcast formats) shipping components that served ads to hundreds of millions of users globally.
- Partnered with data science to design and run A/B experiments on new ad concepts, using results to refine UI patterns before global rollout

iOS Engineer - Nike

August 2021 - October 2022

- Worked on Nike's Valiant Labs innovation team, shipping experimental product concepts from prototype to production in rapid cycles.
- Designed and developed a running app for first-time female runners — shaping inclusive, community-driven experiences that reinforced motivation, habit formation, and shared progress.
- Designed a community chat feature that proved successful enough to be integrated into Nike Sneakers app, extending its impact across Nike's digital ecosystem.

Education & Skills

B.S in Computer Science, Minor Entrepreneurship & Innovation at **University of Maryland**, College Park, MD

Design · Product Design · Interaction Design · Design Systems · Workflow Design · Information Architecture · Figma · Prototyping · A/B Testing · Accessibility · WCAG · Design Tokens · Motion Design
